Healthy Longevity Research Center Scholarships 2022

Announcing the Scholarship winners

The new Tel Aviv University Healthy Longevity Research Center brings together excellence in research to generate ideas and translate them into real-life tools for promoting health and improving quality of life among the elderly – physically, emotionally, socially, environmentally, nutritionally, culturally and more.

The following students have been awarded a scholarship for 2nd semester of the academic year, 2021-2022

Hanna Rapuano, PhD student
Mitochondrial copy number variations across scleractinian coral age groups
Faculty of Life Sciences

Shon Levkovich, PhD student
The ‘Metabolostasis’ network and its decline in aging
Faculty of Life Sciences

Nimrod Rappoport, PhD student
Hematopoietic stem cell gene expression during aging at single cell resolution
Faculty of Exact Sciences

Ruth Maman, PhD student
Characterizing the maternal role of healthy older women and assessing its’ contribution to health and wellbeing of women with chronic stroke
Faculty of Medicine

Zuha Miaary, PhD student
Reintegration in society and at work one year after ischemic stroke: associations with the patient’s health status, sense of well-being, personal resilience and expectations
Faculty of Medicine

Shwartz Sapir, MSc student
The differences between haptic and visual feedback on spatiotemporal parameters of learning in adults and older adults
Faculty of Medicine

Meytal Wiil, Postdoctoral trainee
Mobile cognition: novel virtual reality-based paradigm to study cognitive–motor interactions in the context of fall risk in aging
Sagol School of Neuroscience

Adaya Liberman, PhD student
Worlding with dementia: an empiric-philospeculative research
Faculty of Social Sciences

Meirav Hauben, PhD student
The role of paid work in the lives of retired workers – A mixed methods longitudinal study
Faculty of Humanities

Gai Farchi, PhD student
Amnesic writing: The dementic mother in the works of Annie Ernaux and Michal Ben-Naftali
Faculty of Humanities

Yaara Edelsburg, MA student
The mother mystery: Secrecy strategies in auto/biographic texts of daughters about their mothers
Faculty of Humanities

Shira Dushy-Barr, PhD student
The Aging Subject - A Psychoanalytic Perspective
Psychotherapy Program in collaboration with Faculty of Humanities

Omer Bender, PhD student
Profiling immunologic response to pathogens in elderly population with or without Alzheimer’s disease
Faculty of Medicine

Melody Kasher, PhD student
Deciphering of the casual genetic relationships between rheumatoid arthritis and cardiovascular comorbidities
Faculty of Medicine

Hasan Ishtayeh, PhD student
Investigating the role of autophagy in mutant PABPN1 revealed disruptions in cellular processes in Oculopharyngeal muscular dystrophy (OPMD)
Faculty of Medicine

Elisabeth Kleebblatt, PhD student
Inducible senescence in cultured mast cells as a model for elucidating the impact of aging on mast cell functions
Faculty of Medicine

Lucia Adriana Lifshits, PhD student
Harnessing protein engineering for the development of protein interaction immune modulators
Faculty of Medicine

Sapir Golan, MSc student
The relationship between regional abdominal adiposity in midlife and cognitive functioning, and neuropathology; among individuals at high Alzheimer’s disease risk
Faculty of Medicine

Mazal Cohen, PhD student
An LHX2-OTX2 complex regulate AMD SNP’s region
Faculty of Medicine

Rotem Iris Orad, PhD student
Brain Imaging changes in dementia with Lewy bodies: an advanced MRI study
Faculty of Medicine
